VLocker Dual Access Ride Lockers

VLocker has solved the problem of providing guests short-term locker space while riding the latest rides and attractions for all ages.

A unique award winning patented queue line management locker system.

Proud to be a member of the following associations

Lockers Pictured:
Installed at Cedar Point's Steel Vengeance, Ohio

Benefits of VLocker Ride Lockers:

- Can be offered free to guests or guests can be charged a rental fee for extra revenue generation
- Rapid allocation of lockers
- Guests can keep smart phones and cameras with them for most of their queuing time. This provides guests with more distractions and activities while queuing

Specific information for attraction designers:

- Reach out to your VLocker representative to discuss requirements for ride lockers
- Customisation options available to theme the lockers to suit the individual ride or attraction

Ride Entrance

- Guest clicks on the touchscreen as instructed by visual demonstration on Access Terminal screen, enters their date of birth and chooses their favorite icon
- A locker number is assigned and the number displayed on screen
- Door is opened electronically

Ride Exit

- Guest clicks on the touchscreen as instructed by the Access Terminal and is guided through the process
- Locker is identified and the number displayed on screen
- Door is opened electronically

*Built-in safeguards prevent locker being allocated if door is still open on exit side

The VLocker Ride Locker Solution:

1. Lockers are positioned as close to ride embarkation as possible so that the number of lockers required only has to cater to a small number of ride cycles.
2. A "wall" of Lockers is positioned between ride entrance and ride exit, allowing access from one side when entering the ride and from the other side when exiting the ride. Entrance and exit areas are completely separated by the locker "wall".
3. Lockers have dual doors with multiple networked locker access terminals on both entrance and exit sides.
4. Locker access terminals use the latest Vrental software to provide secure and extremely rapid allocation of lockers.
5. Large video display screens provide instructions and directions regarding ride locker use.
